a new handle, in chat, November 2026

@jeffrey · Aesthetic.Computer · Second edition, November 16, 2026

Abstract. Aesthetic.Computer has no menus. It has a prompt, and everything on the network is a word you type into it. That is fun once you know some words and confusing before then. This book is the words: 76 spells from A to Z, each with what it does, what it needs, and what happened when a browser cast it on November 17, 2026. Its page is borrowed from older manuals: a demon dictionary, a bestiary, H. G. Wells's *Little Wars*, a War Office pamphlet and a saboteur's pocket guide [1].

How to read it. Words set like `this` are spells: type them at the prompt and press Enter. The spells run in alphabetical order, signs first. The top corner of each page shows the first and last spell on it. The index at the back sorts them by what you want to do.

Every entry has a line marked CAST**.** It says what a real browser saw when it typed that spell into the live site, signed out. Of 76 spells, 65 did what this book says, 7 did something else and the entry now says what, and 4 are not confirmed yet.

CHAPTER I

HOW TO CAST

Go to `https://aesthetic.computer`. The page you land on is the prompt, drawn on the cover. Type a word and press Enter. That word is a *spell*, and what it opens is a *piece*: a small program that takes the whole screen.

Casting.

Inside a piece, its name sits in the top left corner. Tap it and you are at the prompt again. On a keyboard, Esc does the same in most pieces. A few keep the keyboard for themselves: **`notepat`** plays notes with it, and **`laklok`** and **`chat`** type with it.

Getting back.

Every piece is an address. **`notepat`** is also `https://aesthetic.computer/notepat`, and you can send that to someone or keep it as a bookmark.

Addresses.

A space adds a parameter and a colon adds an option. **`rect red`** is the rectangle brush in red. **`tone:sine 440`** is a sine tone at 440.

Words take words.

Nothing breaks. Type a word the site does not know and a helper answers in a line. It guesses, and it can guess wrong: in the test, **`notepta`** got back *Did you mean 'notifs'?* You can also ask it a question in plain words. When it has nothing, **`list`** shows every spell and **`chat`** has people in it.

Wrong words.

A wrong address opens a teal page that says *Piece Not Found*.

In the address bar.

Tap the crosshair at the bottom right of the prompt, or press Tab, and the prompt lifts off *dool*, the room underneath. Esc comes back. Swipe up and the prompt slides away over the *mime* feed, a stream of pieces people have published. The down arrow is meant to do the same and did not in the test.

Two doors with no word.

Most people come here for each other. Of 113 signed-in handles counted over five weeks, 47 opened **`laklok`**, the conversation, and two opened **`notepat`**. Each entry that was counted says how many.

People first.

Signed-in handles with recorded activity, October 13 to November 17, 2026. Counts only; no names. A visitor who paints without an account is not in it.

Table C. How the spells were cast

A script opened the live site in a browser with no account, typed each spell, pressed Enter, and wrote down where the address went and whether Esc came home [2]. It did not cast the six spells that publish, charge, notify or delete. It ran three times with the same results. It could not read the prompt's own words, so the helper's replies and the painting steps were read off screenshots and clips by eye. Nothing that needs a login was tried.

Table D. Where the page came from

this book	borrowed from
One narrow column, drawings in the margin	Wells, *Little Wars*, 1913
Slanted side-heads in the margin	Topsell, 1658; War Office, 1896
First and last spell in the page corner	Collin de Plancy, 1863
The same lines in every entry	the open rulebooks
Alphabetical, one being to an entry	Collin de Plancy, 1863
Tables together at the back	War Office, 1896

Pages are 5.5 by 8.5 inches. Print two-up on letter paper as a booklet, fold, and staple the spine.

Set in Latin Modern, with the title in YWFT Processing. The drawings are TikZ and take their colors from the dark scheme in the prompt's own source. The entries are generated from one data file joined with the browser test's results. Built by the papers mill.

The first edition, one sheet titled *AC '26 Magician's Manual*, is in the repository's history.
